

Top Safety Risks

Top 4 Workplace Safety Risks

Lockout/ Target

Protect your workers from accidental discharge of hazardous energy during maintenance with proper disconnection and isolation procedures.

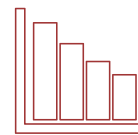

Hazard Communication

Your work site should include a hazard communications program that includes material safety data sheets and chemical-specific precautions.

Injury Reporting

Contract and temporary worker injuries must be recorded in your OSHA logs. We will partner with you to establish effective safety & health training beyond the minimum requirements.

Training Consistency

In safety, there is no such thing as co-employment. All hires need the same depth of training. What is your current staffing provider doing to intentionally contribute to your safety culture?

Safety First Options:

- Pre-Orientation facilities tour
- Custom training design
- Training during orientation period
- Ongoing training through assignment

Call Gary Garofano, your Hire Dynamics Risk & Safety Manager at 404.790.7899 to schedule a survey to ensure that your contingent workforce stays safe, healthy and available to serve your future needs.
